

# MODELS CAN LIE

## An Illustration from Heart Rate Variability Data

---

Raju Rimal and Veronika Lindberg

Updated: 2015/12/07

Presentation

Norwegian University of Life Sciences

# Overview

1. Background
2. Classification with series stack
3. Classification with series averaged over Series-Event Combination
4. Classification with series averaged over Person-Event Combination
5. Some Comparison

## BACKGROUND

---

# Theoretical Background

---

Some theoretical things and something about cross-validation

## CLASSIFICATION WITH SERIES STACK

---

# Training and Cross-validation Errors

# Misclassifications

## Training Misclassifications

# Misclassifications

## Test Misclassification

# Plotting Scores

## Scoreplot for PCR model

Model:PCR

# Plotting Scores

## Scoreplot for PLS model

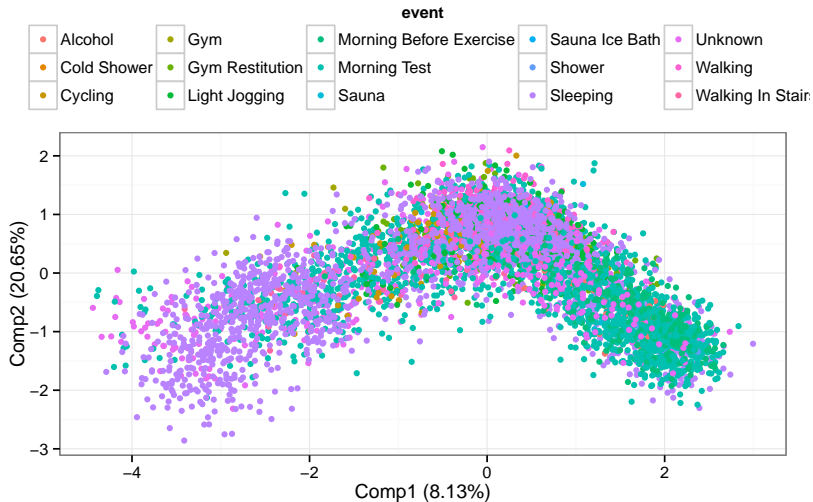

Model:PLS

# Plotting Scores

## Scoreplot for CPPLS model

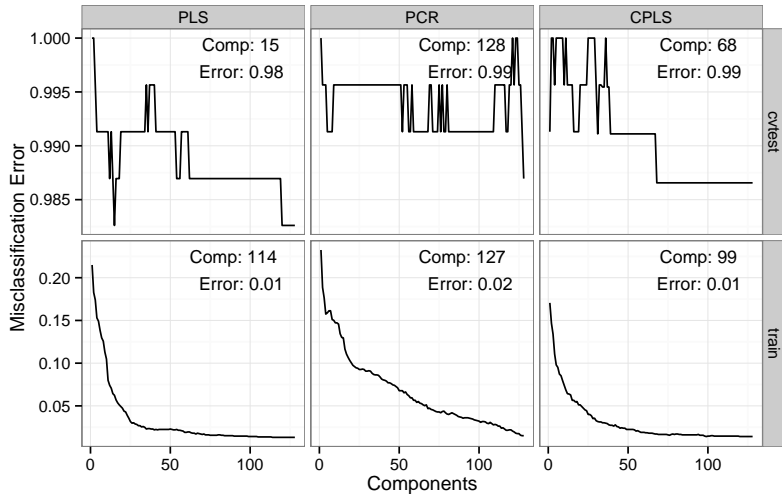

Model:CPPLS

# CLASSIFICATION WITH SERIES AVER- AGED OVER SERIES-EVENT COMBINA- TION

---

# Training and Cross-validation Errors

# Misclassifications

## Training Misclassifications

# Misclassifications

## Test Misclassification

# Plotting Scores

## Scoreplot for PCR model

Model:PCR

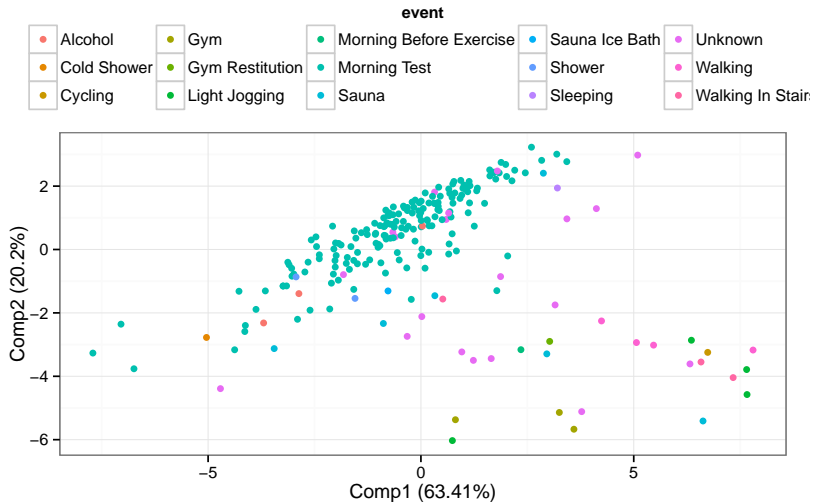

# Plotting Scores

## Scoreplot for PLS model

Model:PLS

## Scoreplot for CPPLS model

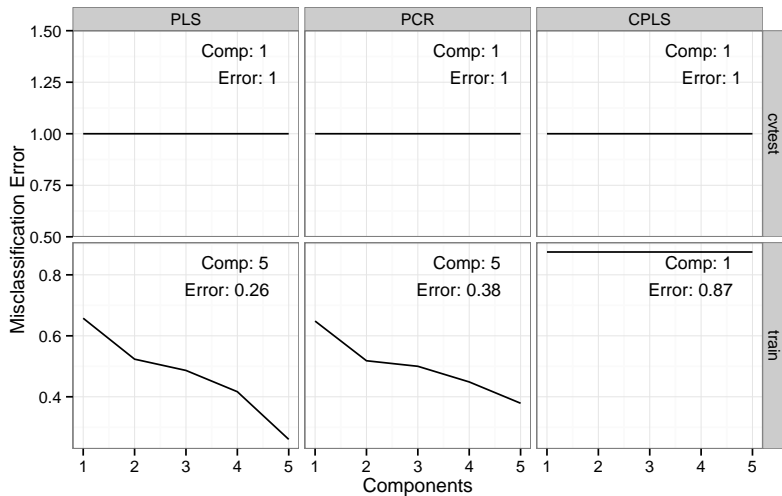

Model:CPPLS

# CLASSIFICATION WITH SERIES AVER- AGED OVER PERSON-EVENT COMBINA- TION

---

# Training and Cross-validation Errors

# Misclassifications

## Training Misclassifications

# Misclassifications

## Test Misclassification

# Plotting Scores

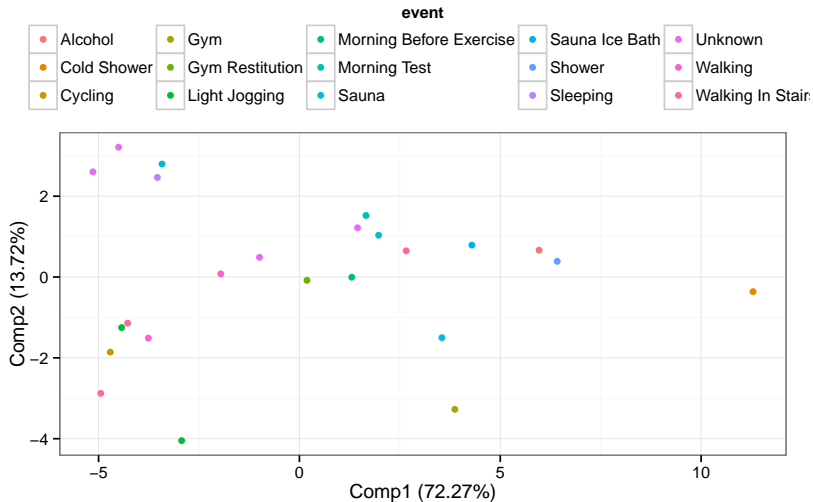

## Scoreplot for PCR model

Model:PCR

## Scoreplot for PLS model

Model:PLS

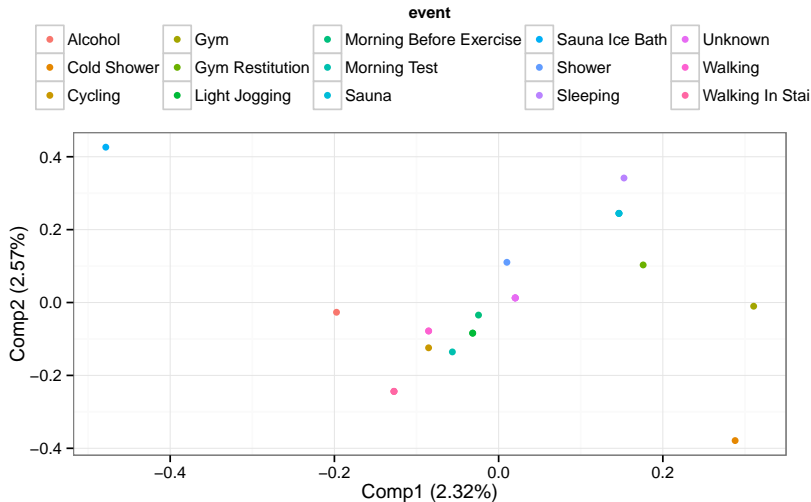

# Plotting Scores

## Scoreplot for CPPLS model

Model:CPPLS

## SOME COMPARISON

---

# Misclassification Errors

Figure: Training and Test Misclassification Error for all the three models. The LDA models were fitted with the scores obtained from three models with components (number above each points) needed to get minimum cross-validation error.
